7. When were you last exposed to the sun (including tanning booths)?
Last week (mild)
8. Do you use sunless tanning lotions? ___ Yes NO When was it last applied?

Laser Hair Removal Patient Consent

I consent to the use of VIKINY DIODE at the Orchid medical center, Sharjah for the removal of unwanted hair.

I understand that the laser produces a focused beam of light that generates a wavelength of energy that is selectively absorbed by the pigment in the hair follicle. The absorption produces heat, which damages the hair follicle and diminishes its ability to grow hair.

Clinical results may vary depending on individual factors, including medical history, skin and hair type, patient compliance with pre/post treatment instructions, and individual response to treatment. I am aware of alternative methods of hair removal such as shaving, plucking, depilatory creams, waxing and electrolysis. I have made an informed decision to proceed with laser hair removal.

The following points need be paid attention:

- No tanning or self-tanning creams for 4-6 weeks prior to and after treatments due to increased side effects.
- Waxing and plucking should be avoided for 6 weeks prior to treatment.
- Tattoos and permanent makeup in the treatment area can be altered with laser treatments.
- A complete medical history is to be completed including medication, allergies and skin type.
- Individuals who have used Accutane within the past 6 months or who used any medication requiring limited exposure to sunlight are not good candidates for VIKINI procedure.

Skin effects will possibly include temporary redness similar to a sunburn. Some swelling and light crusting may occur. These side effects should resolve within a few hours to several days following treatment. Hypopigmentation or hyperpigmentation is uncommon and rarely permanent. Sun avoidance and use of sunscreen is recommended.

I consent to the taking of photographs and their anonymous use for the purpose medical audit, education and promotion.
